

Key elements; Art, DT, maths, science, problem solving, communication, listening, teamwork, imagination

Our Architecture Summer Schools are run over five days. We have developed the course to give students a taste of what would be expected at the entry level to an architecture degree course.

Students are encouraged to work on their own initiative, with support from our animators, but also from each other.

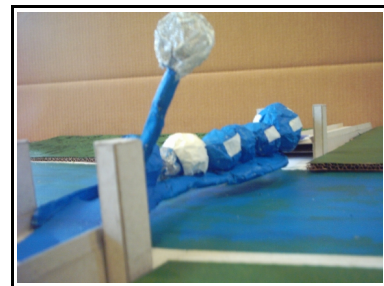

Without the constraints of the school day the students are able to experience much more the way in which architects work and that of a school of architecture.

Aimed at students with an interest in all aspects of design, the students work together and individually to build a scale site model of an area local to the venue site (which could be a school, education centre etc.)

They then set about designing and making models to a given brief related to the site model.

Presentation of completed work on the final afternoon to staff, parents and invited dignitaries. Students are each presented with an Architecture Workshops certificate of achievement.
